Profile

I connect small weaknesses that become a real attack path, then validate how far that path goes across identity, cloud and infrastructure. I work hands-on from the first hypothesis to verified technical impact.

Technical focus

Penetration Testing · Active Directory · Cloud Security

Experience

Technical delivery from initial hypothesis to evidence-backed findings and remediation.

2024 - PRESENT

BIP / Cyber Security Senior Consultant

Plan and execute offensive assessments with a high degree of autonomy, from initial attack hypotheses to hands-on validation and clear technical findings. Recent work includes IT/OT Red Team activity, Azure exposure investigations and enterprise Active Directory assessments.

2021 - 2024

Deloitte Italia / Senior Solution Specialist

Delivered Red Team and Purple Team engagements across enterprise and public-sector environments, including recurring VDI and user-environment assessments for a European agency. External attack-surface work focused on overlooked public assets and credible paths to initial access.

2020 - 2021

PwC Italy / Cybersecurity Consultant

Built a penetration-testing foundation across internal infrastructure, Active Directory and internet-facing exposure. Also worked on security standards and business continuity.

2018 - 2019

Earlier security consulting experience

Started in security consulting and completed my first penetration test before specialising in offensive security.
